1. We double stitching everywhere, with four fold stitching at bottom stress point.

Double stitching inside and double stitching outside to make sure the inflatables are strong enough.the most important thing is our seams are done using thread that can withstand great force (17 kg) before tearing.Back tack mean A few stitches will be taken in reverse to secure a line of stitching. As you see, we will do back tack for the stitching.

2. Structure

Reinforcement for access areas, floor and column joints or wherever structure panels meet.

3.More secure

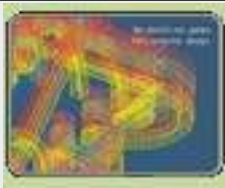

For the safety, we make safe flap inside the air tube.when the electricity is cut off and make the blower off suddenly, the flap will help to stop the air let out too quickly. So the kids can have enough time to leave the inflatable. Above the zipper, there is a zipper cover, which is help to disperse the zipper's stress. We make strong and smooth zippers at bottom of each inflatable. Uusully,there are two zippers on each small bouncers.And there are3to4 zippers on bigger size.
